## Career Objectives

As a worker of your company, I am obliged to take all of my responsibilities and work with utmost importance and deliver user-friendly products and results as desired accordingly by the management with appropriate time management as I upscale my skill-set. I will be inclined to exhibit open-mindedness and learn from colleagues and seniors as much as possible as I work efficiently.

## Projects

### ✓ Teazy Tech

A site built for an organization that trains teacher teacher in the modern ways of using technological tools to teach students and keep teachers in the know and vogue.

- I worked hand in hand with a back-end developer and front-end developer to integrate a blog feature and an admin dashboard where the admin users can upload blog posts unto the website.
- I, in tandem with the other front end developer built the UI with user experience in mind, implemented contact forms, gallery views, and implemented the blog page section.

### ✓ **Moniepoint website clone**

This was a practice project where I cloned and built the tech conglomerate, Moniepoint, up till the point of their two homepages for business and personal users and their Auth login and sign-up routes

- This was a solo project where I used reactJs to build out the UI and supabase for the backend and auth database...The data from user was stored manually in supabase while the sensitive information was hashed with front-end bcrypt.

### ✓ **Plan Infiniti Cinema**

While still in my early conquest to master web and mobile app development, I started a movie site project where users could go to download latest movies on their devices...I later adopted it into an app for streaming and downloading movies while maintaining the website. This was within the first four months of my learning web development.

- I built out the UI and refactored multiple times to improve user experience...
- The movie download links gotten from nkiri were stored on a database on supabase, so users were redirected to nkiri's database for downloading
- The mobile app is still in progress...

## **Skills**

- Javascript
- Typescript
- React.Js

- TailwindCss
- React\_Native
- Next.Js
- SQL
- C++
